MAIDSAFE
Pledge Partnership

creative

What it is

Openness
and being available
to others

Altruism
Willingness
to help
others

Decentralization
Redistribution of network effects
among participants of the
network.
~~Quality~~
~~Open sharing (not big size)~~

Willingness to
share

What it's not

No boundaries
that would limit
network

Not a goal
- Built-in social goals

What can we do together?

Building
a network
that can
be improved
by all

Building
a network
that can
be improved
by all

What it is

What it's not

What can we do together?

Open source
but mostly community
on the web

No copyright - the
idea is to let everyone
reproduce it

Building
on the web
with open source
and open data

At least
possible
open source
- no copyright - just say
D.O.C.

Open source
- But in real world

Open source
- But in real world

Decentralization

Redistribution of network effects
among participants of the
network.

~~open source~~
~~but in real world~~

creative
cc

What it is

Transparency
with data, accessible
open source code

Minimum
viability
continuous
improvement

Decentralization
a lot of network effects

What it's not

No long-term vision
culture is loose + loose ends
quite keep

open source
- but on code/parts

What can we
do together?

Open source
community

Open source
community

creative

What it is

Permissionless
Not freely associable
You can choose your circle

Minimum
Viable

Centralization

Sometimes by having people help
each other

Decentralization

- Redistribution of network effects
among participants of the
network.

What it's not

No kingmakers no
Value or benefit from new
gatekeepers

- Corporate
- Bottom-Gate/Profit

What can we do together?

What it is

Definition of network effects
among participants of the network

Definition of network effects
among participants of the network

Definition of network effects
among participants of the network

Definition of network effects
among participants of the network

What it's not

Definition of network effects
among participants of the network

Definition of network effects
among participants of the network

What can we do together?

Definition of network effects
among participants of the network

Definition of network effects
among participants of the network

What it is

Definition of a network
A group of people or organizations
connected by relationships

Networks are everywhere
In nature, in society, in technology
They are the backbone of many systems

Decentralization
- Distribution of network elements among participants of the network
- Spontaneous
- Emergent (bottom-up)

Example
- Internet
- Social media

What it's not

Not a single entity
Not a top-down structure
Not a fixed hierarchy

Not a static system
Not a closed system
Not a controlled system

What can we do together?

Collaboration
Cooperation
Coordination

Shared resources
Shared information
Shared decision-making

What it is

Definition of network already among participants of the network.

Definition of network already among participants of the network.

Definition of network already among participants of the network.

What it's not

Definition of network already among participants of the network.

Definition of network already among participants of the network.

What can we do together?

Definition of network already among participants of the network.

democracy

GROUND

use and system observation
top of hierarchical
decentralized

IMPORTANT - JARVIS POLICIES

EDGE
A social mechanism
that allows a way
to

NOTE:
social should be
used as a
can be built into
a decentralized
system

NOTE:
social should be
used as a
can be built into
a decentralized
system

NOTE:
social should be
used as a
can be built into
a decentralized
system

GROUP

we need
systemic
decentralization
the top of the hierarchy
is the most dangerous

we need
a system
that is not
controlled by
the top of the hierarchy

we need
a system
that is not
controlled by
the top of the hierarchy

we need
a system
that is not
controlled by
the top of the hierarchy

we need
a system
that is not
controlled by
the top of the hierarchy

IT IS NOT
SUFFICIENT IN
STONE
AGE. ESTABLISH THE
NEW FIELD

we need
a system
that is not
controlled by
the top of the hierarchy

FOUR
Security should be
based on the
assumption that
the system is
not secure
can be built into
a decentralized
SYSTEM

we need
a system
that is not
controlled by
the top of the hierarchy

PROBLEM (Cryptography)
It is not possible
to have a system
that is not controlled
by the top of the hierarchy

break

11:15-11:30

Group 1 Agreements

• Governance

• Web pages

• STANDARD for Addressing

• IDENTITY

• HTTP AUTHENTICATION

• HOW TO AVOID
BE CENTRALIZATION

Group 4

Agree

1) Content addressable
vs location based

2) HAVE PORTABLE

1 Governance
(like DNS)

Group #5

1) Content accessibility
but we are stuck

- IDENTITIES
- W

2) WANT LOTS OF PROTOCOLS
(Interop)

3) SECURITY

4) PRIVACY

TRILL

• GOVERNANCE

• IDENTITY

• INTEROPERABILITY

• Minimum standards
to get to B2B2C

• CRYPTO (Decentralized)

Group 6

1) Dispute

2) (A) A

• HOW TO
INCOM
multi FA
Privacy
